## KNAUER Column Selection Guide

for HPLC/UHPLC, Prep LC, FPLC and GPC

Handy  
column  
care

Made in Germany

Wide  
area of  
application  
services

## Get in touch

### Sales

If you want to learn more about our products and services or get a quote, the experts from our Sales team are happy to assist you with your request.

Phone: +49 30 809727-0 (workdays 9-17h CET)

Fax : +49 30 8015010

Email: [sales@knauer.net](mailto:sales@knauer.net)

### Technical Support

Do you have questions about the installation or the operation of your instrument or software? Our friendly and competent Technical Support staff will be glad to answer your questions.

Phone: +49 30 809727-111 (workdays 9-17h CET)

Fax : +49 30 8015010

Email: [support@knauer.net](mailto:support@knauer.net)

# Welcome to KNAUER

**Made in Germany  
since 1962**

Based in Berlin, KNAUER is a medium-sized, owner-managed company that has been serving the sciences since 1962.

We develop and manufacture scientific instruments of superior quality for liquid chromatography. The range includes systems and components for analytical HPLC / UHPLC, preparative HPLC, fast protein liquid chromatography (FPLC), multi-column chromatography / simulated moving bed (SMB), and osmometry.

**Independent and  
family owned**

The founder Dr. Herbert Knauer and his wife Roswitha are still active as advisers in the company to this day. The couple's daughter, Alexandra Knauer, has been managing director and owner of the company since 2000.

Several awards for outstanding products and innovations as well as entrepreneurial excellence make KNAUER a „leading employer“.

**Comprehensive service  
from the manufacturer**

Our wide-ranging services complement our excellent instruments: The trainings are performed by experts and cover a variety of topics for beginners to experienced users.

The high-performance customer support and repair service provide fast and spot on solutions.

If you need support for your research project, we help you to develop applications, transfer and optimize methods or develop software.

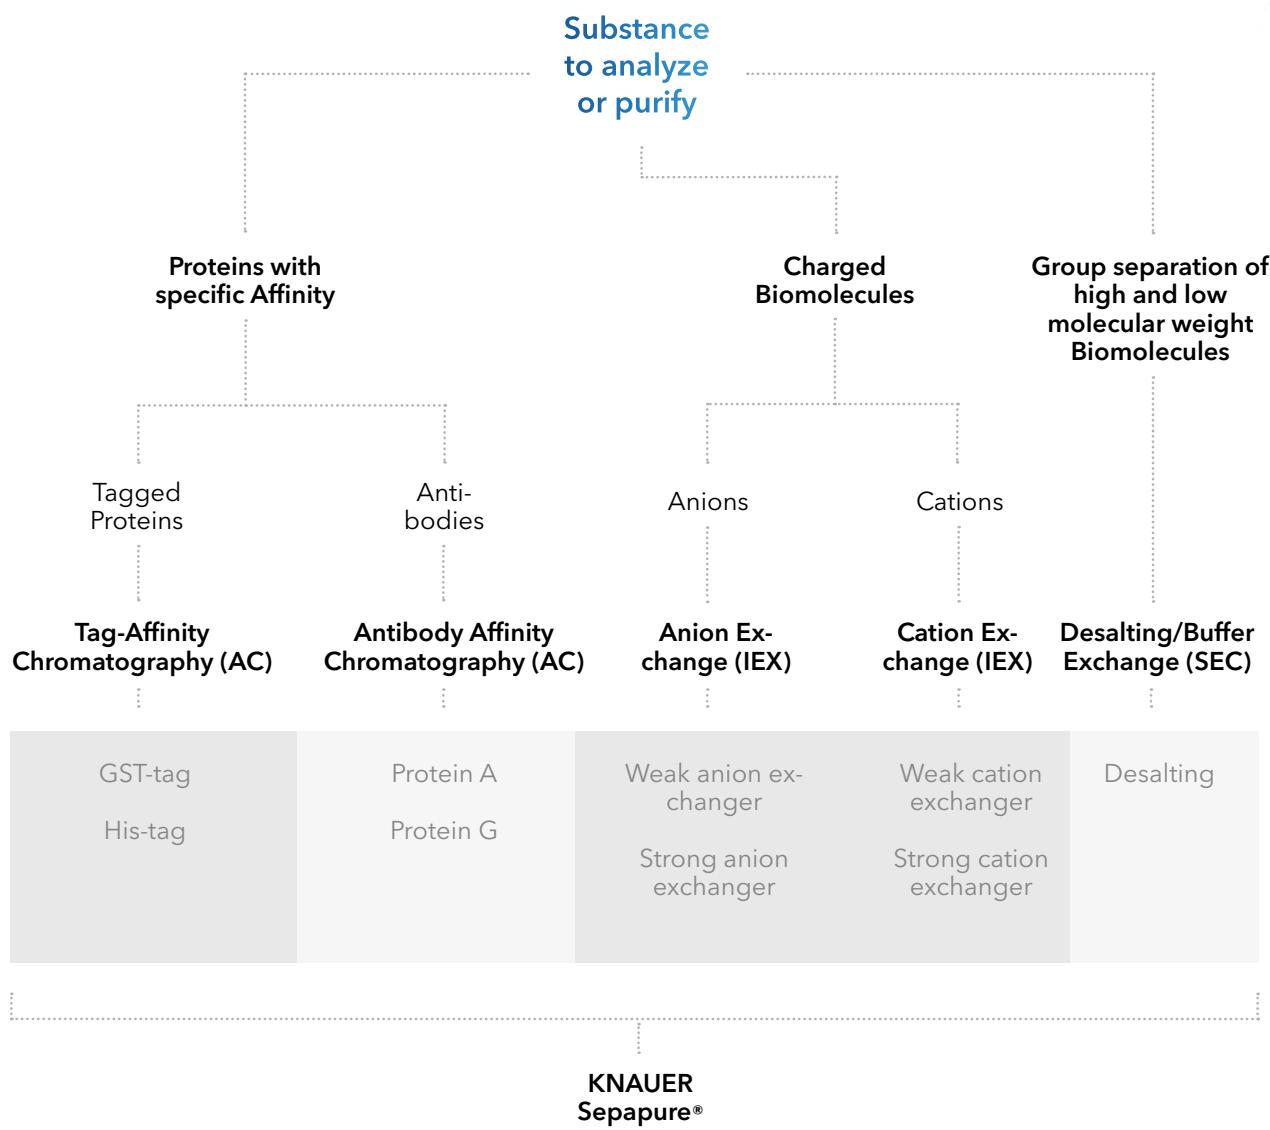

## Non-native conditions

Substance to analyze or purify							
Molecular weight < 2000 Da				Molecular weight > 2000 Da			
Soluble in water		Soluble in organic solvent		Soluble in organic solvent		Soluble in water	
Ionic	Non-ionic	Soluble in ACN/H <sub>2</sub> O, MeOH/H <sub>2</sub> O	Soluble in Hexane/Heptane	Soluble in THF, Toluene, Chloroform	Soluble in DMSO, DMAc, DMF		
Ion-exclusion	HILIC	Reversed Phase (RP)	Normal Phase (NP)	GPC	Special GPC	SEC	Wide pore Reversed Phase (RP)
H-form (USP L17)	Silica (USP L3)	Classical C18 (USP L1)	Silica (USP L3)	Porous styrene-divinylbenzene	Special GPC polymer material	Hydrophilic polymer material	Wide pore classical C18 (USP L1)
Ca-form (USP L19)	NH <sub>2</sub> (USP L8)	Hydrophilic aqueous C18 (USP L1)	NH <sub>2</sub> (USP L8)				Wide pore C18A hydrophilic/aqueous (USP L1)

## Native conditions

## Find more information

Finding the best fitting column for your HPLC/UHPLC, GPC or FPLC application always starts with looking closely at the substances you want to analyse or purify.

This flow chart gives you a guideline how to select the right column for your application. Start at the top and follow the decision lines all the way down to find a column recommendation.

More details about KNAUER columns and phases can be found in the Column Product Selection Guide and online:  
[www.knauer.net/columns](http://www.knauer.net/columns)

# Eurospher II

Eurospher II offers outstanding mechanical and chemical stability. With physical properties very similar to those of Kromasil 100, Eurospher II columns can be used to replace Kromasil® columns, providing excellent peak symmetry for acids, bases, and neutrals.

Compared to Kromasil® 100, Eurospher II has

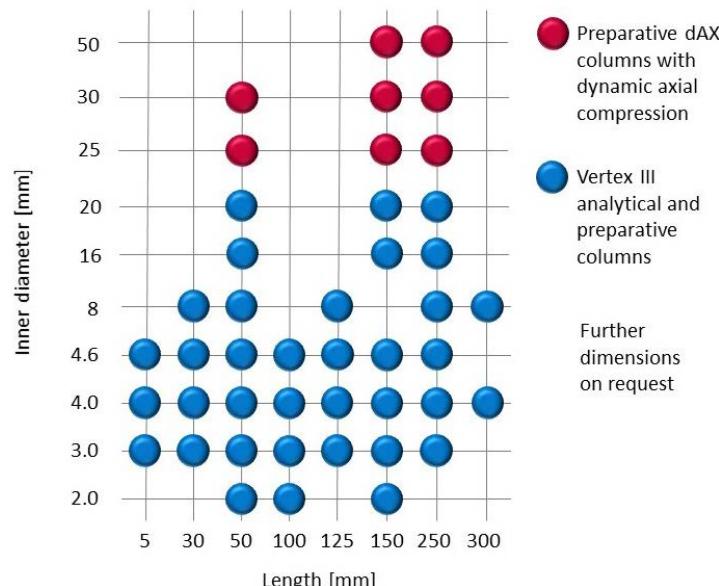

- nearly the same particle shape
- a lower metal impurity specification
- higher mechanical stability
- comparable selectivity in RP mode (Eurospher II C18 H vs. Kromasil® 100 C18)

## Physical properties

Silica gel	ultra pure, > 99.99 %
Metal content	< 10 ppm
Particle size	2 / 3 / 5 / 10 µm (15 / 20-45 µm upon request)
Particle form	spherical
Pore size	100 Å
Specific surface	320 ± 20 m²/g
Pore volume	0.8 ml/g
Density	430 g/l

## Available column dimensions

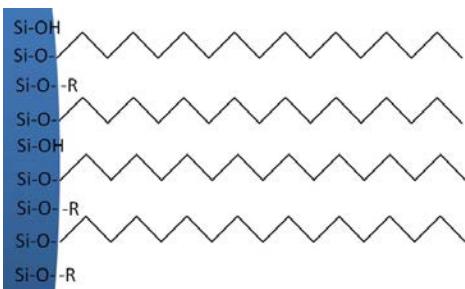

## Recommended application areas

Phase type	non polar	polar	acidic	basic	Chelator	hydroph. retention	shape selectivity	extreme aqueous	pH > 9	LC-MS
C18										
C18 H		good								
C18 P		good	suitable							
C18 A				good						
Phenyl		suitable								
C8		suitable		good						
C8 A				good						
C4			good	good						
HILIC										
NH <sub>2</sub>		good	suitable	suitable						
CN			suitable	suitable						
Diol			suitable							
Si					suitable					

  
excellent    good    suitable    not recommended

## **Eurospher II 100 C18 - USP L1**

- Ultra pure, spherical high performance HPLC phase based on silica gel
- Unpolar, monomeric C18 (Octadecyl) modification, endcapped, with 16 % carbon content (~ 50 % endcapping).

### **Properties**

Separation mechanism: Hydrophobic interaction

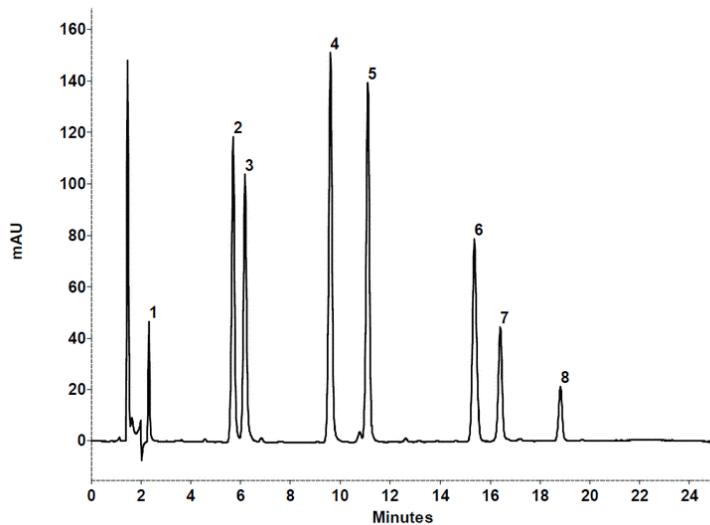

### **Key features**

High-class HPLC phase perfectly suited to take on routine analyses as well as the most ambitious chromatography tasks, classical C18 phase with ca. 50 % endcapping and resulting 16 % carbon content, outstanding mechanical and chemical stability.

### **Recommended application areas**

- acidic, basic and neutral analytes in reversed phase mode, for example sulphonamides
- anabolic steroids
- anti-psychotics
- beta blocker
- sudan dyes
- phenols and preservatives

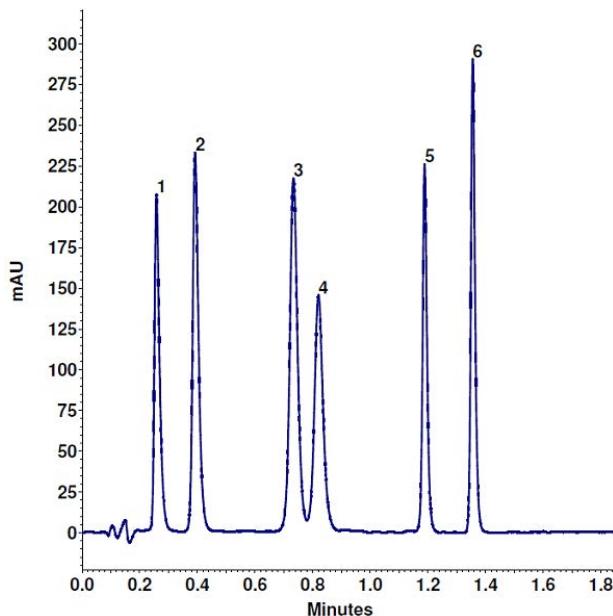

**Eurospher II 100-5 C18, 150 x 2.0 mm ID**  
Article number: 15BE181E2J

#### **Selectivity test mix**

- |                   |                            |
|-------------------|----------------------------|
| 1. Uracil         | 5. N,N-Dimethylaniline     |
| 2. Aniline        | 6. Benzoic acid ethylester |
| 3. Phenol         | 7. Toluene                 |
| 4. p-Ethylaniline | 8. Ethylbenzene            |

**Eurospher II 100-2 C18, 50 x 2 mm ID**  
Article number: 05BE181E2F

#### **Steroids**

- |                   |                        |
|-------------------|------------------------|
| 1. Cortisone      | 4. Deoxycorticosterone |
| 2. Corticosterone | 5. Norgestrel          |
| 3. Testosterone   | 6. Progesterone        |

**Tip:** Never use classical C18 phases with 100 % aqueous mobile phase. The hydrophobic C18 chains will collapse.

## **Eurospher II 100 C18 A - USP L1**

- Ultra pure, spherical high performance HPLC phase based on silica gel
- Polar, monomeric C18 (Octadecyl) modification, polar endcapping, with 10 % carbon content (~ 50 % endcapping)

### **Properties**

Separation mechanism: Hydrophobic and polar interaction

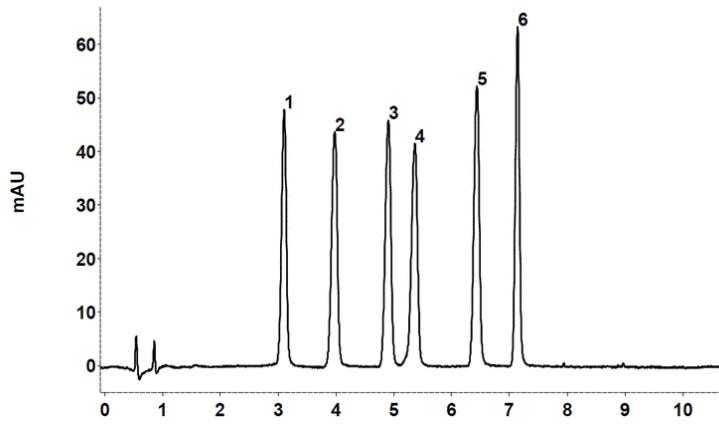

### **Key features**

C18 A phase with alternative, more polar selectivity, suited for the use with pure aqueous mobile phases, 50 % endcapping and resulting 10 % carbon content, outstanding mechanical and chemical stability, suited for analytical as well as semi preparative and preparative applications.

### **Recommended application areas**

Polar endcapped C18 phase for water soluble and polar analytes, 100 % aqueous eluents for analysis of very polar compounds, basic pharmaceutical ingredients, water soluble vitamins, catecholamines as well as organic acids.

**Eurospher II 100-3 C18 A, 100 x 3 mm ID**  
Article number: 10CE184E2G

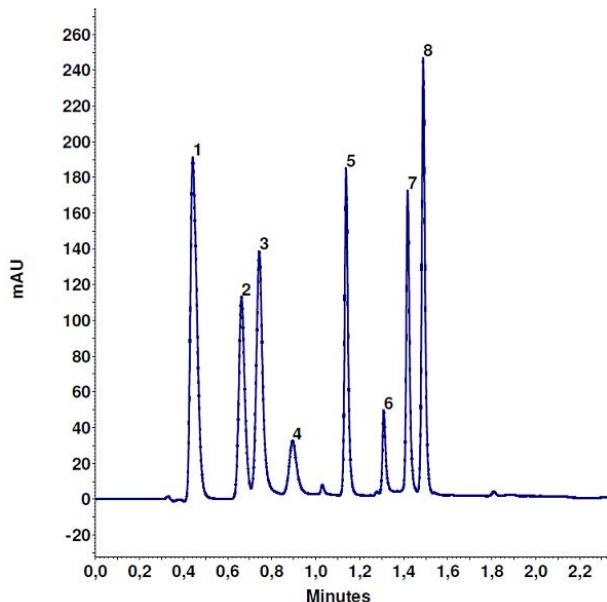

#### **Aldehydes/Ketones**

DNPH Derivates of:

- |                 |                    |
|-----------------|--------------------|
| 1. Formaldehyde | 4. Acroleine       |
| 2. Acetaldehyde | 5. Propionaldehyde |
| 3. Acetone      | 6. Crotonaldehyde  |

**Eurospher II 100-2 C18 A, 100 x 2 mm ID**  
Article number: 10BE184E2F

#### **Water soluble vitamins**

- |                   |                   |
|-------------------|-------------------|
| 1. Ascorbic acid  | 5. Nicotinamid    |
| 2. Nicotinic acid | 6. Folic acid     |
| 3. Thiamine       | 7. Cyanocobalamin |
| 4. Pyridoxin      | 8. Riboflavin     |

**Tip:** With an endcapping the influence of non-derivatized silanol groups can be minimized. The endcapping reagent is generally a smaller silane than used for derivatisation. This treatment reduces the unwanted interaction of polar or charged analytes (acids, bases etc.) because the amount of available silanol groups is reduced.

## **Eurospher II 100 C18 H - USP L1**

- Ultra pure, spherical high performance HPLC phase based on silica gel
- Unpolar, monomeric C18 (Octadecyl) modification, high efficiency endcapping with 17 % carbon content (~ 99 % endcapping)

### **Properties**

Separation mechanism: Hydrophobic interaction

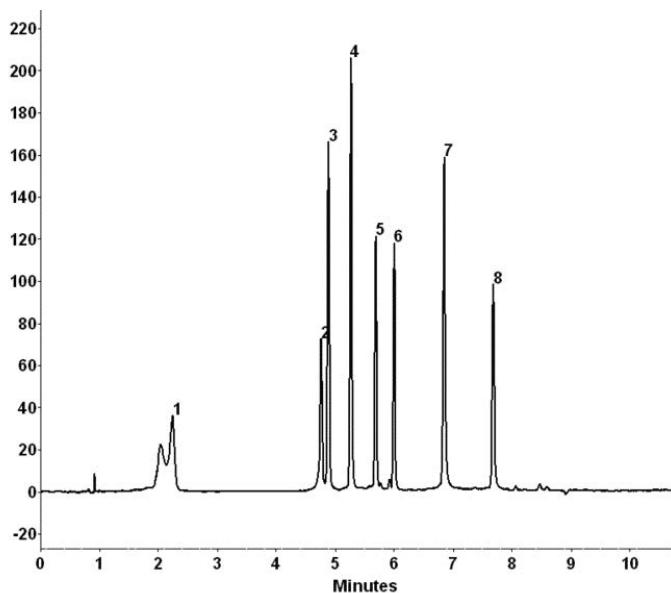

### **Key features**

Unpolar C18 phase with high efficiency endcapping and 17 % carbon content, therewith higher pH stability in the range of 1-12, outstanding mechanical and chemical stability, suited for analytical as well as semi preparative and preparative applications.

### **Recommended application areas**

Recommended alternative to Kromasil 100 C18, für acidic, basic and neutral analytes in reversed phase mode with extended pH range.

## **Eurospher II 100 C18 P - USP L1**

- Ultra pure, spherical high performance HPLC phase based on silica gel
- Unpolar, trifunctional C18 (Octadecyl) modification, high efficiency endcapping, with 20 % carbon content (~ 99 % endcapping)

### **Properties**

Separation mechanism: Hydrophobic and steric interaction

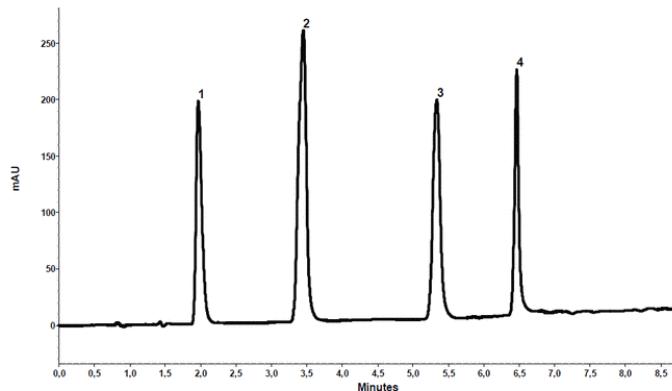

### **Key features**

KNAUER's most unpolar C18 phase, polymeric, high efficiency endcapping of 99 % and 20 % carbon content, higher pH stability in the range of 1-12, outstanding mechanical and chemical stability, suited for analytical as well as semi preparative and preparative applications.

### **Recommended application areas**

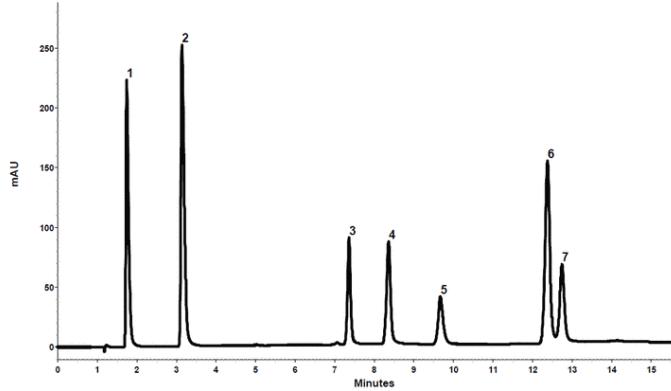

Alternative selectivity to standard C18; stationary phase in Eurospher II C18 family with the highest carbon load; fully endcapped; excellent shape selectivity and pH stability.

**Eurospher II 100-3 C18 P, 100 x 3.0 mm ID**  
**Article number: 10CE182E2G**

#### **Sedativa**

- |             |             |
|-------------|-------------|
| 1. Barbital | 3. Prominal |
| 2. Luminal  | 4. Revonal  |

#### **Softdrink additives**

- |              |                 |
|--------------|-----------------|
| 1. Acesulfam | 5. Aspartam     |
| 2. Saccharin | 6. Benzoic acid |
| 3. Vanilline | 7. Sorbic acid  |
| 4. Caffeine  |                 |

**Tip:** Not all C18 phases are comparable! When replacing an existing column, always have a close look at the characteristics like carbon load, pore size and specific surface area.

## **Eurospher II 100 C8 - USP L7**

- Ultra pure, spherical high performance HPLC phase based on silica gel
- Monomeric C8 (Octyl) modification, standard endcapping, with 10 % carbon content (~ 50 % endcapping)

### **Properties**

Separation mechanism: Hydrophobic interaction (lower compared to C18 phases)

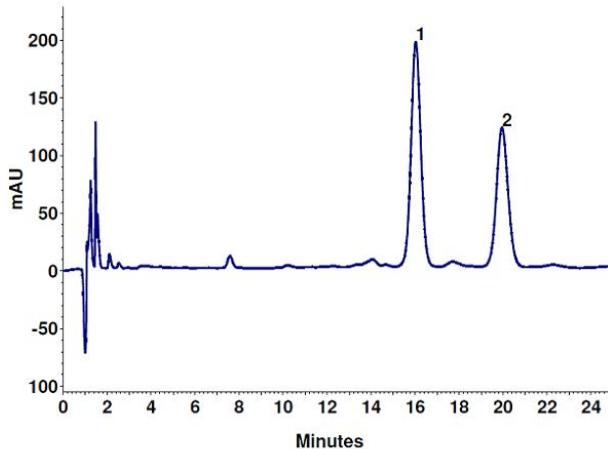

### **Key features**

Classical C8 phase, standard 50 % endcapping and 10 % carbon load, outstanding mechanical and chemical stability, suited for analytical as well as semi preparative and preparative applications.

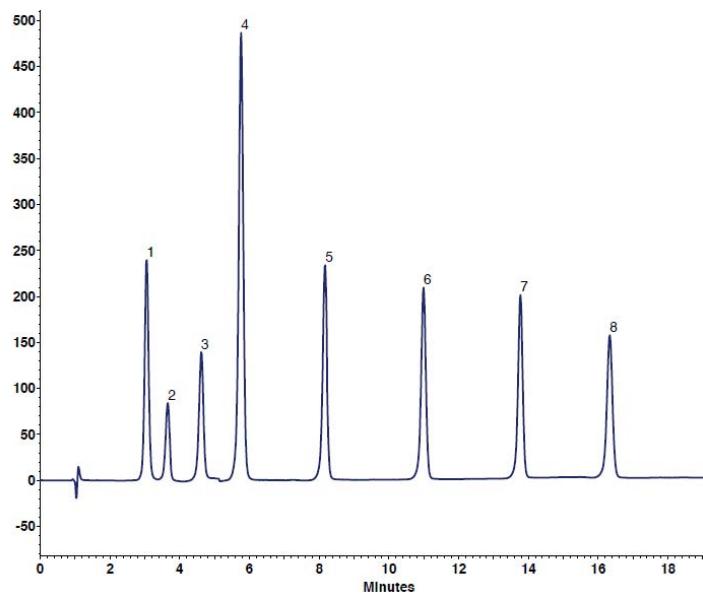

### **Recommended application areas**

Similar selectivity to C18 phase but less retention due to the lower hydrophobicity; useful for determination of water soluble vitamins, steroids, catecholamines, sedatives etc.

**Eurospher II 100-5 C8, 150 x 4.6 mm ID**  
Article number: 15EE081E2J

**Eurospher 100-5 C8, 125 x 4.0 mm ID**  
Article number: 12DE081ESJ

#### **Ingredients of cosmetics**

1. Bisabolol oxide A
2. Bisabolol oxide B

#### **Preservatives**

1. p-hydroxy benzoic acid
2. 2-methoxy benzoic acid
3. benzoic acid
4. sorbic acid
5. p-hydroxy methylbenzoate
6. p-hydroxy ethylbenzoate
7. p-hydroxy propylbenzoate
8. p-hydroxy butylbenzoate

**Tip:** Column lifetime can be extended by using moderate conditions like temperatures not higher than 45 °C, backpressure below the maximum pressure and a good sample preparation.

## **Eurospher II 100 Phenyl - USP L11**

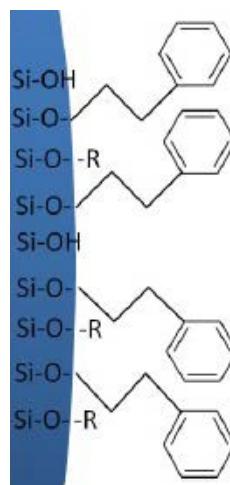

- Ultra pure, spherical high performance HPLC phase based on silica gel
- Phenyl modification (Phenylpropyl), 12 % carbon content

### **Properties**

Separation mechanism: Pi-Pi Interactions

### **Key features**

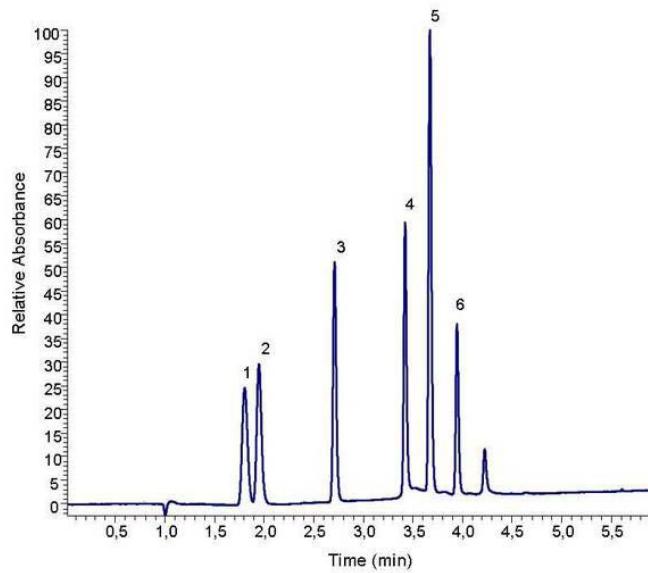

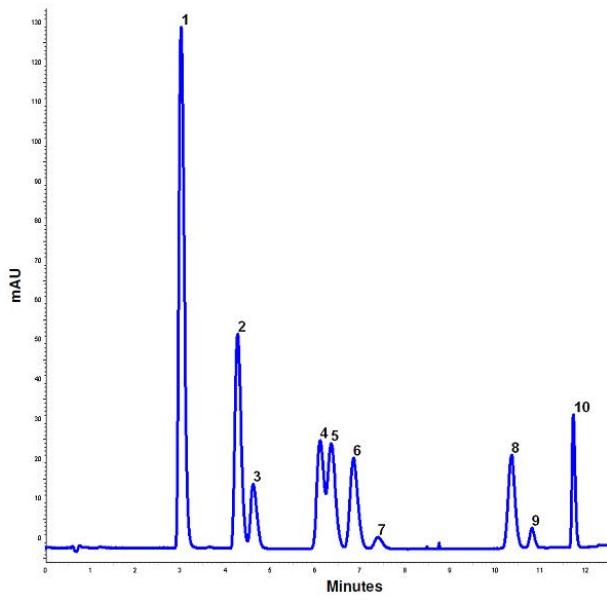

Classical phenyl phase with 12 % carbon load, outstanding mechanical and chemical stability, suited for analytical as well as semi preparative and preparative applications

### **Recommended application areas**

Alternative selectivity for aromatic and moderately polar analytes or mixtures with varying polarity and aromaticity

**Eurospher II 100-2 Phenyl, 100 x 2 mm ID**  
**Article number: 10BE050E2F**

#### **Aldehydes/Ketones**

DNPH-derivatives of

- |                    |                  |
|--------------------|------------------|
| 1. Formaldehyde    | 6. Acetone       |
| 2. Acetaldehyde    | 7. Matrix        |
| 3. Matrix          | 8. Butyraldehyde |
| 4. Acrolein        | 9. Matrix        |
| 5. Propionaldehyde | 10. Benzaldehyde |

#### **Biocompatible polymer building monomers**

- |                               |                                     |
|-------------------------------|-------------------------------------|
| 1. 2-Hydroxyethylmethacrylate | 4. Ethylenglycon dimethacrylate     |
| 2. N-Vinyl-2-pyrrolidon       | 5. Styrene                          |
| 3. Methyl methacrylate        | 6. Methacryloxyethyltrimethylsilane |

**Tip:** For UHPLC columns like Eurospher II 2 µm particle size, samples and eluents should be filtered through a 0.2 µm instead of a 0.45 µm membrane filter. Frits at column in- and outlet have smaller pores than classical HPLC columns and block more easily.

## **Eurospher II 100 NH<sub>2</sub> - USP L8**

- Ultra pure, spherical high performance HPLC phase based on silica gel
- Amino modification (Aminopropyl)
- 4 % carbon content (without endcapping)

### **Properties**

Separation mechanism: Hydrophilic and ionic interactions

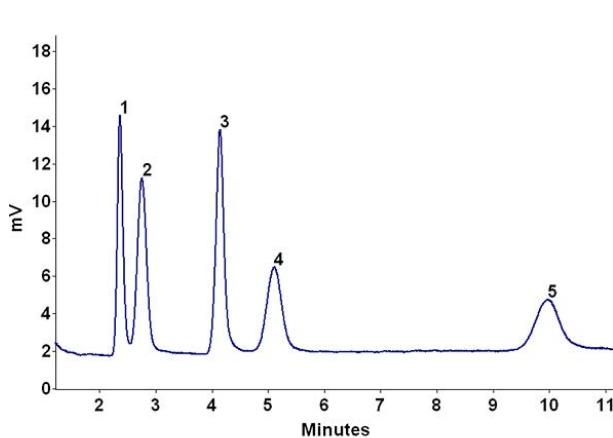

### **Key features**

Multi mode column for RP, NP, HILIC and IC, Aminopropyl modification without endcapping, outstanding mechanical and chemical stability

### **Recommended application areas**

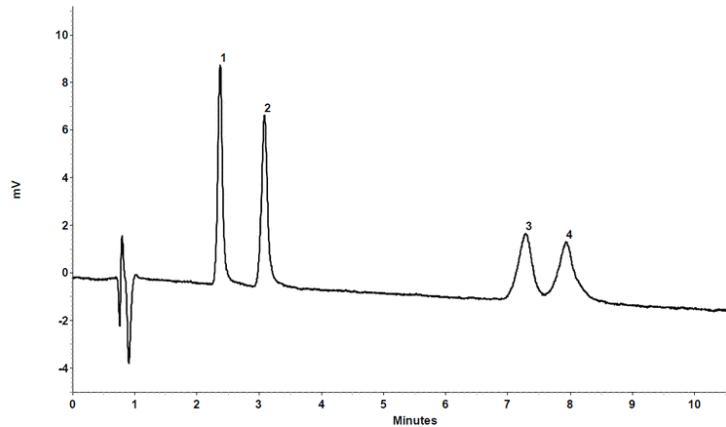

Most flexible phase in the Eurospher II family; can be used in three modes: normal phase, reversed phase and ion chromatography mode (weak anion exchanger); different selectivity to the silica packing; in reversed phase mode mainly used for analysis of carbohydrates

**Eurospher II 100-3 NH<sub>2</sub>, 100 x 3.0 mm ID**  
**Article number: 10CE190E2G**

#### **Carbohydrates**

- |               |                |
|---------------|----------------|
| 1. Fructose   | 4. Maltose     |
| 2. Glucose    | 5. Maltotriose |
| 3. Saccharose |                |

#### **Sweeteners**

- |             |             |
|-------------|-------------|
| 1. Xylitol  | 3. Isomalt  |
| 2. Sorbitol | 4. Lactitol |

**Tip:** A precolumn can help to protect your analytical column. Especially when working with highly matrix afflicted samples it is highly recommended to use precolumns.

## Eurospher II 100 Si

- Ultra pure, spherical high performance HPLC phase based on silica gel
- No modification, no endcapping, with 0 % carbon content

### Properties

hydrophilic interaction

### Key features

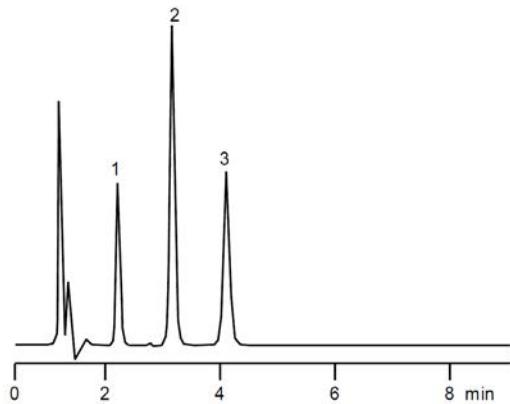

High-class HPLC phase perfectly suited to take on routine analyses as well as the most ambitious chromatography tasks, outstanding mechanical and chemical stability.

### Recommended application areas

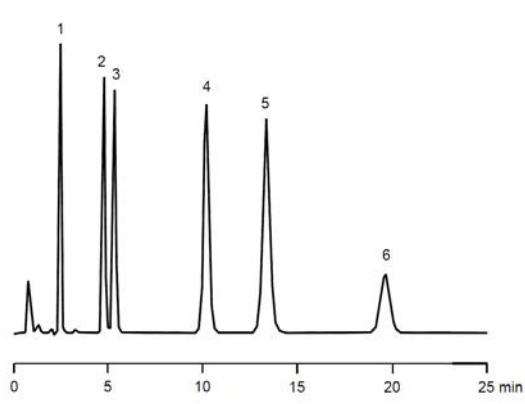

Wide range of different applications, i.e. SEC (size exclusion chromatography) but also for normal phase HPLC and HILIC; good choice for analytical and preparative purposes to separate polar compounds

Si-OH  
Si-OH  
Si-OH  
Si-OH  
Si-OH

**Eurospher 100-5 Si, Column 150 x 4 mm**  
**Article No.: 15DE000ESJ**

1. 2-Nitroaniline
2. 3-Nitroaniline
3. 4-Nitroaniline

1. alpha-Tocopherol
2. beta-Tocopherol
3. gamma-Tocopherol
4. delta-Tocopherol
5. Vitamin D2
6. trans-Retinol

**Tip:** Normal phase (NP) stationary phases have been the first phases for chromatography and that is why their properties of polarity were determined as "normal". The stationary phase of a NP column has polar properties and is commonly used with nonpolar solvents as hexane or heptane. The other way round a reversed phase (RP) column has covalent characteristics and is used with more polar eluents, like mixtures of acetonitrile and water.

## Eurospher II 100 Diol

- Ultra pure, spherical high performance HPLC phase based on silica gel
- Diol, no endcapping, with 5 % carbon content

### Properties

Hydrophilic interaction

### Key features

High-class HPLC phase perfectly suited to take on routine analyses as well as the most ambitious chromatography tasks, classical Diol phase without endcapping and 5 % carbon content, outstanding mechanical and chemical stability

### Recommended application areas

Alternative to the silica packing with shorter equilibration time and comparable selectivity; due to the lower activity of these packings it can be also used for SEC-applications

**Tip:** The most important column parameters for evaluation are retention time, peak symmetry and theoretical plates. Retention time to prove the reproducibility of measurements. Peak symmetry to estimate how good the column bed is packed (peak symmetry value of 1.0 is optimal). Theoretical plate numbers to determine the effectiveness of the HPLC column.

## Most common HPLC modes

HPLC mode	Mobile phase	Stationary phase	Analytes
<b>Separation of small molecules (up to 2000 Da)</b>			
<b>Reversed Phase RP (&lt;200 Å)</b>	Polar (e.g. mixtures from water and acetonitrile)	Nonpolar (e.g. C18)	Mid-polar - mid-nonpolar soluble in polar and aqueous solvents
<b>Normal Phase NP</b>	Nonpolar (e.g. heptan)	Polar (e.g. SiOH)	Nonpolar soluble in nonpolar solvents, insoluble in water
<b>Hydrophilic Interaction Liquid Chromatography HILIC</b>	Polar organic solvents + water	Polar (e.g. SiOH)	hydrophilic and highly polar not retained by RP

## **Eurospher II 100 CN**

- Ultra pure, spherical high performance HPLC phase based on silica gel
- Cyano modification (Cyanopropyl), no endcapping, with 7 % carbon content

### **Properties**

Hydrophobic and hydrophilic interaction

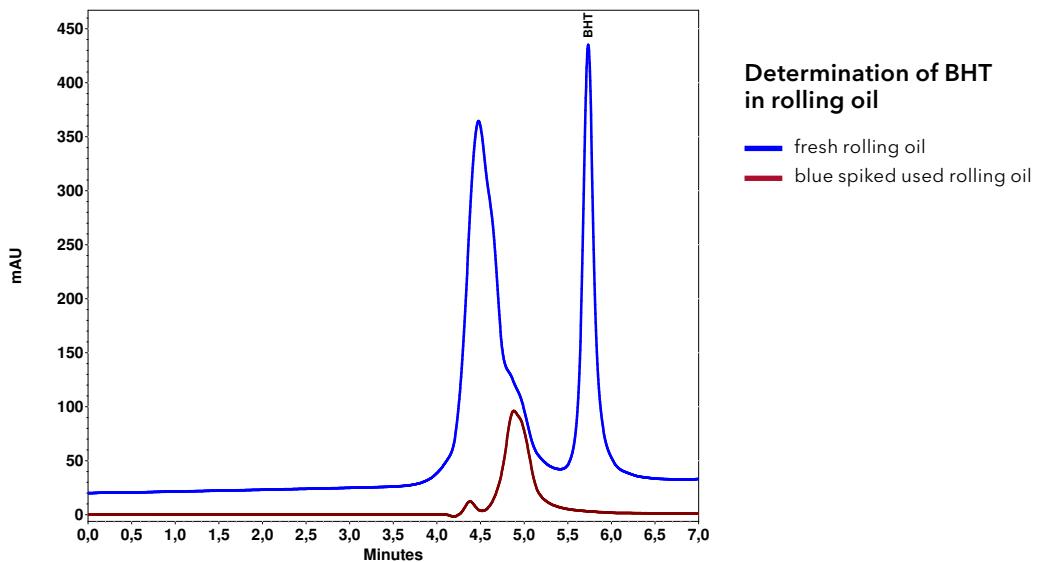

### **Key features**

Classical phenyl phase with 7 % carbon load, outstanding mechanical and chemical stability, suited for analytical as well as semi preparative and preparative applications

### **Recommended application areas**

For a wide range of application in normal phase mode as well as reversed phase mode (steroids, carbohydrates polar compounds)

**Eurospher II 100-5 CN, 250 x 3 mm**

## Eurospher II 100 HILIC

- Ultra pure, spherical high performance HPLC phase based on silica gel
- Zwitterionic modification: Ammonium - sulfonic acid
- 7 % carbon content

### Properties

Separation mechanism: Hydrophilic and weak electrostatic interactions

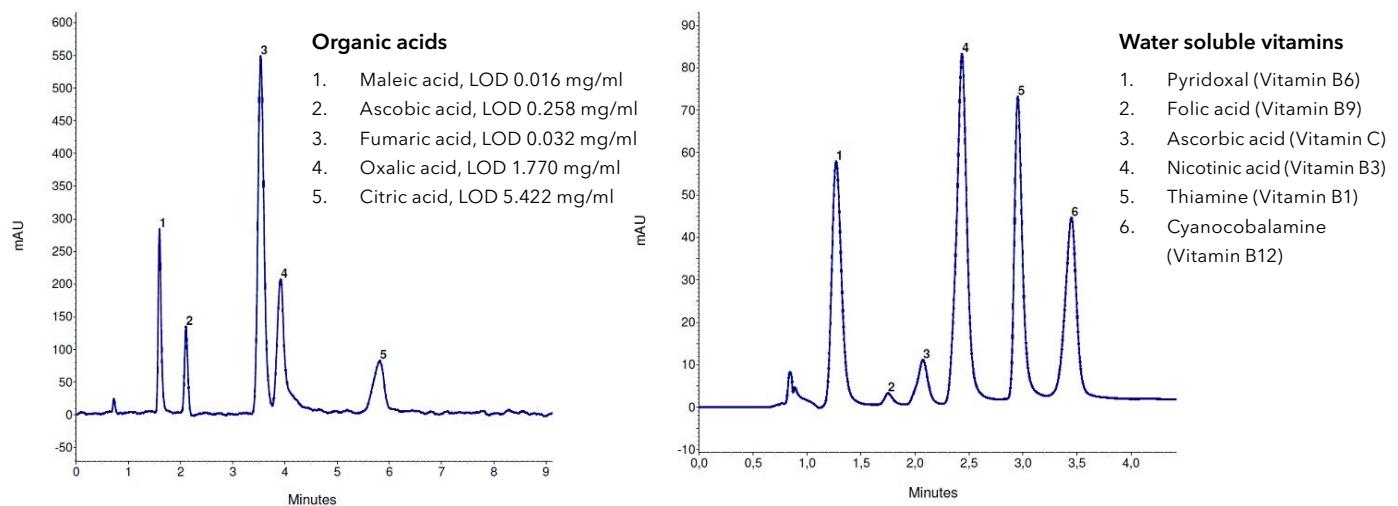

### Key features

Modern HILIC phase with zwitterionic modification on the basis of ammonium- sulfonic acid outstanding mechanical and chemical stability

### Recommended application areas

Especially suited for the separation of hydrophilic, polar and ionic analytes which are poorly retained on reversed phase columns; behavior is the other way round on Eurospher II HILIC compared to RP which makes it an ideal tool to enhance chromatographic separations for these molecules

**Eurospher II 100-5 HILIC, 150 x 3 mm ID**  
Article number: 15CE120E2J

**Tip:** HILIC applications are well-suited for coupling with MS detection. The high organic content of the applied mobile phases are qualified well for evaporation in the MS's ionization source.

# Eurosil Bioselect

Eurosil Bioselect columns for HPLC feature a wide-pore (300 Å) stationary phase and were specifically designed to separate large biomolecules, such as proteins and peptides.

The use of larger pore silica-based bonded phases leads to improvements in resolution, capacity and recovery of proteins and other biomolecules, due to a reduction in size exclusion mechanism and enhanced molecular diffusion rates.

A pore size of 300 Å has become the accepted standard for wide pore silica gels because it has been found to be suitable for a broad range of molecular weight proteins, peptides and oligonucleotides. In general, peptides exceeding approximately 50 amino acids and oligonucleotides greater than 25 residues are preferentially analyzed on 300 Å materials.

## Characteristics

Eurosil Bioselect columns are available in 4 modifications, useful for a wide range of separation tasks involving large molecules up to 100,000 Da. Strict manufacturing procedures ensure a very narrow pore size distribution. Interfering anions or heavy metal ions on the silica surface are not present in Eurosil Bioselect columns because only ultra pure silica gel and high quality chemical modifications are employed.

## Separation mechanism of Eurosil Bioselect

To separate larger molecules, they need to freely access the interior of the pores of the packing material. Therefore, the analytes' diameter must be smaller than the average pore diameter. For higher molecular weight solutes, the use of lower pore size materials (60-120 Å) as typically used for the analysis of small molecules may result restricted diffusion in the material's pores and therewith reduced column efficiency.

Biomolecules	Eurosil Bioselect
2000 - 5000 Da	C18/C18A
Biomolecules	Eurosil Bioselect
5000 - 20,000 Da	C8
Biomolecules	Eurosil Bioselect
20,000 - 100,000 Da	C4

## Modifications

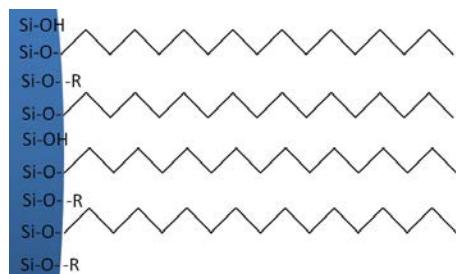

The recommended modification of Eurosil Bioselect depends on the molecular weight of the analytes.

## Eurosil Bioselect 300 C18 - USP L1

- Ultra pure, spherical wide pore HPLC phase based on silica gel
- Unpolar, monomeric C18 (Octadecyl) modification, endcapped
- 7.5 % carbon content (conventional endcapping).

### Properties

Separation mechanism: Hydrophobic interaction

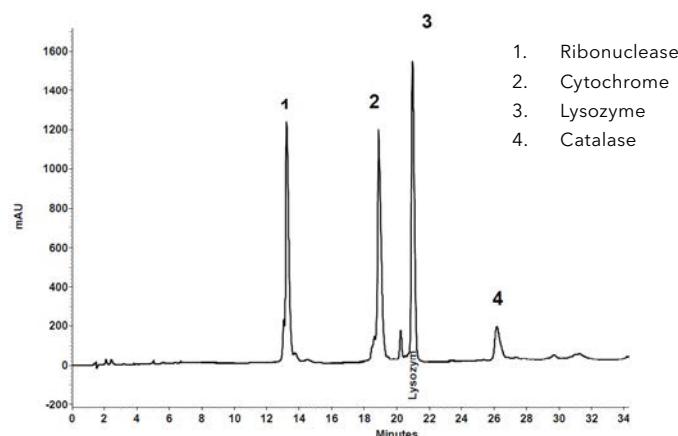

### Key features

Eurosil Bioselect 300 C18 has been specifically developed for the determination and purification of peptides, proteins, and oligonucleotides up to MW approx. 5000 Da. The optimized manufacturing process guarantees excellent batch-to-batch reproducibility. The Eurosil Bioselect sorbent is the first choice for Biochromatography with silica material.

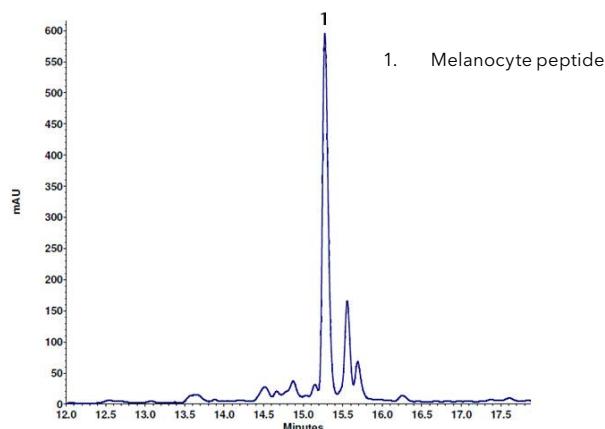

### Recommended application areas

Hydrophilic biomolecules, peptides, peptide mapping after enzymatic digestion

**Eurosil Bioselect 300-5 C18A, 125 x 4 mm ID**  
Article number: 12DK184EBJ

**Eurosil Bioselect 300-5 C18A 150 x 4 mm ID**  
Article number: 15WK184EBJ

Caused by the larger pore size of 300 Å, Eurosil Bioselect phases are not as mechanically stable as classical silica gel phases with up to 150 Å and should not be used above 200 bar pressure.

## Eurosil Bioselect 300 C18A - USP L1

- Ultra pure, spherical wide pore HPLC phase based on silica gel
- Unpolar, monomeric C18 (Octadecyl) modification, endcapped, with 7 % carbon content (hydrophilic endcapping).

### Properties

Separation mechanism: Hydrophobic interaction

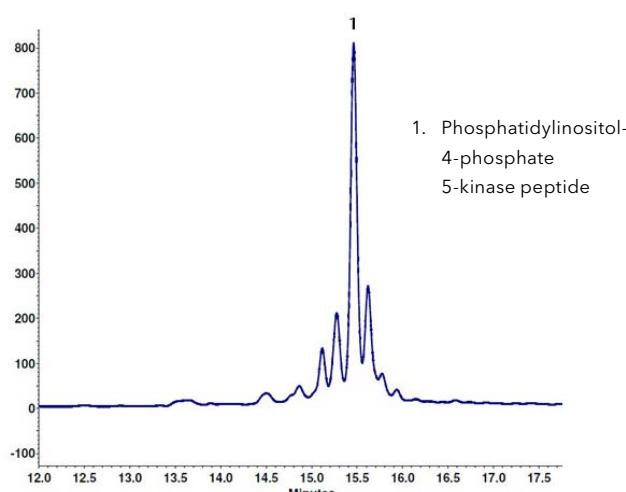

### Key features

Eurosil Bioselect 300 C18A has been specifically developed for the determination and purification of peptides, proteins, and oligonucleotides up to MW approx. 5,000 Da. The optimized manufacturing process guarantees excellent batch-to-batch reproducibility. The Eurosil Bioselect sorbent is the first choice for Biochromatography with silica material.

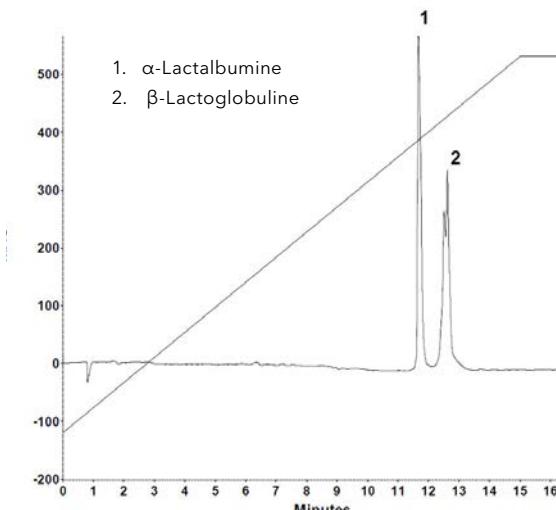

### Recommended application areas

Hydrophilic and polar biomolecules, peptides, very polar biomolecules separated with 100 % aqueous eluents.

## Eurosil Bioselect 300 C8 - USP L7

- Ultra pure, spherical wide pore HPLC phase based on wide pore silica gel
- Unpolar, monomeric C8 modification, endcapped
- 4.5 % carbon content (conventional endcapping)

### Properties

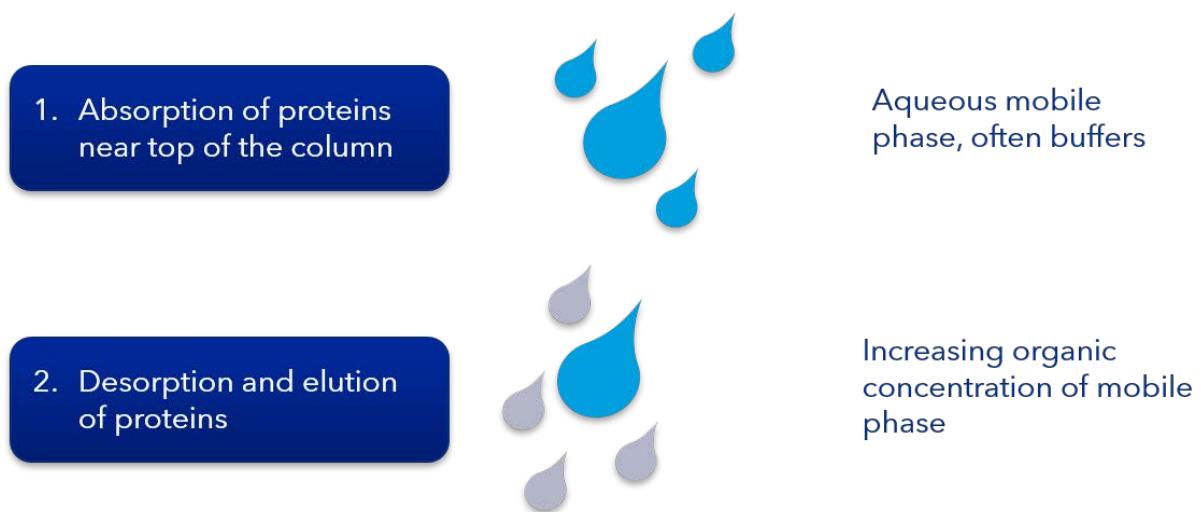

Separation mechanism: Hydrophobic interaction

### Key features

Eurosil Bioselect 300 C8 has been specifically developed for the determination and purification of peptides, proteins, and oligonucleotides up to MW approx. 20,000 Da. The optimized manufacturing process guarantees excellent batch-to-batch reproducibility. The Eurosil Bioselect sorbent is the first choice for Biochromatography with silica material.

### Recommended application areas

Hydrophilic biomolecules, peptides, peptide mapping after enzymatic digestion

## Eurosil Bioselect 300 C4 - USP L26

- Ultra pure, spherical wide pore HPLC phase based on wide pore silica gel
- Unpolar, monomeric C4 modification, endcapped
- 2 % carbon content (conventional endcapping)

### Properties

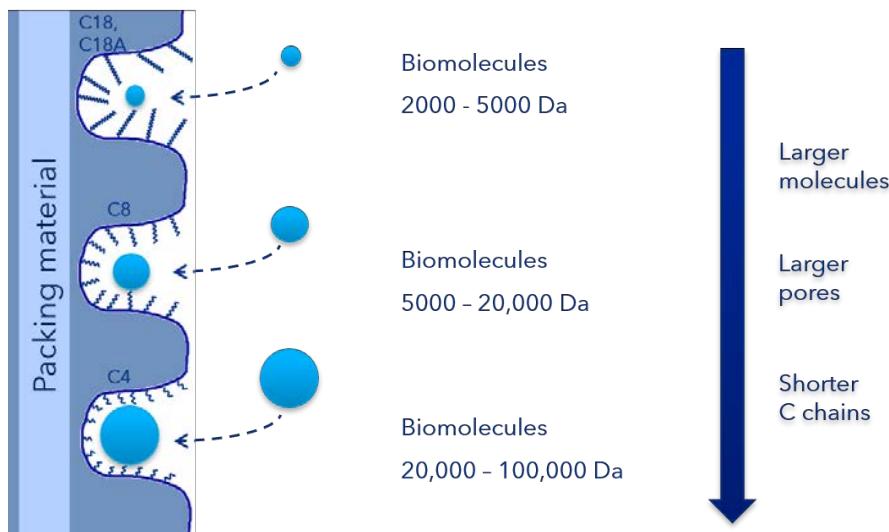

Separation mechanism: hydrophobic and hydrophilic interaction

### Key features

Eurosil Bioselect 300 C4 has been specifically developed for the determination and purification of peptides, proteins, and oligonucleotides up to MW approx. 100,000 Da. The optimized manufacturing process guarantees excellent batch-to-batch reproducibility. The Eurosil Bioselect sorbent is the first choice for Biochromatography with silica material.

### Recommended application areas

Hydrophilic biomolecules and especially peptides larger than 10,000- 20,000 Da

# Eurokat

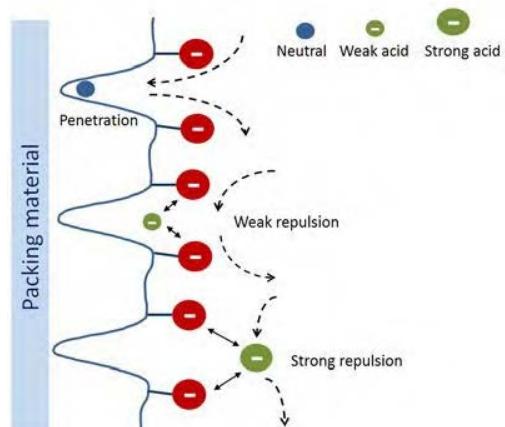

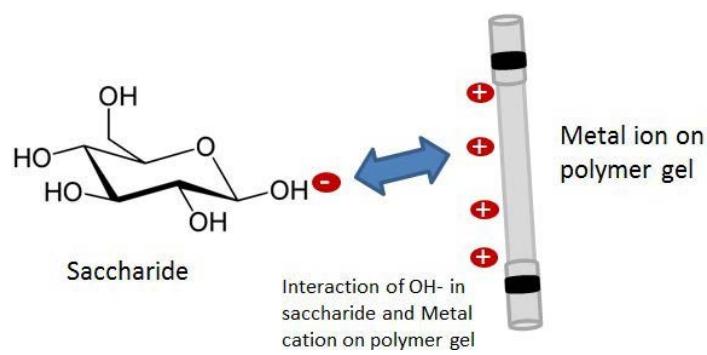

High performance polymer phase for the analysis of organic acids, carbohydrates and alcohols. Available in the ionic forms H, Ca, Pb, Na und Ag.

## Characteristics

Eurokat high performance polymer phases were especially developed for the separation of organic acids, carbohydrates, alcohols and even complex mixtures of these compounds.

Eurokat is a sulfonated cross-linked styrenedivinylbenzene copolymer available in several ionic forms (H, Ca and Pb). This particular cation exchanger is characterized by an outstanding density of functional groups, making it the ideal choice for your ion exclusion, size exclusion and ligand exchange chromatography.

## Principle of ligand exchange mechanism

## Stability

Eurokat polymer columns are extremely stable over the whole pH range. This is one striking advantage compared with silica-based phases which have a limited lifetime at pH extremes, especially in the higher pH range. Most importantly, Eurokat phases show extraordinary column lifetime stability and are not affected by aqueous solvents.

## Choice of chromatographic conditions

The Eurokat stationary phase is designed to be applicable to a wide range of diverse chromatographic conditions. All Eurokat columns can be used at temperatures up to 90 °C with no organic solvents. The best separation of sugars can be achieved using between 60 to 90 °C. To extend separation performance, it is possible to connect up to three columns of Eurokat in series. Eurokat columns require no organic solvents and thus are environmentally friendly.

## Physical properties

<b>Particle size</b>	10 µm, 25-56 µm
	ca. 8 % (H-Form)
<b>Cross-linkage</b>	ca. 6 % (Ca, Pb, Na-Form) higher cross linkage means smaller pore size
<b>Max. pressure</b>	up to 100 bar
<b>Max. temperature</b>	up to 90 °C

## Application areas

- Carbohydrates and organic acids in softdrinks and fruit juices
- Sugar substitutes
- Food preservatives
- Dairy products
- Urine analytic (Uric acid, Hippuric acid)
- Monitoring of fermentation processes

## Eurokat H - USP L17

Sulfonated cross-linked styrenedivinylbenzene copolymer phase for the determination of organic acids, carbohydrates and alcohols

H-form, 8 % cross linkage

### Properties

Cation exchanger, extremely long lasting lifetime when correctly handled, best results with aqueous eluents and small amounts of anorganic acids, recommended eluent 0,01 N sulfuric acid, usage of up to 10 % organic content in the mobile phase is possible

### Technical Data

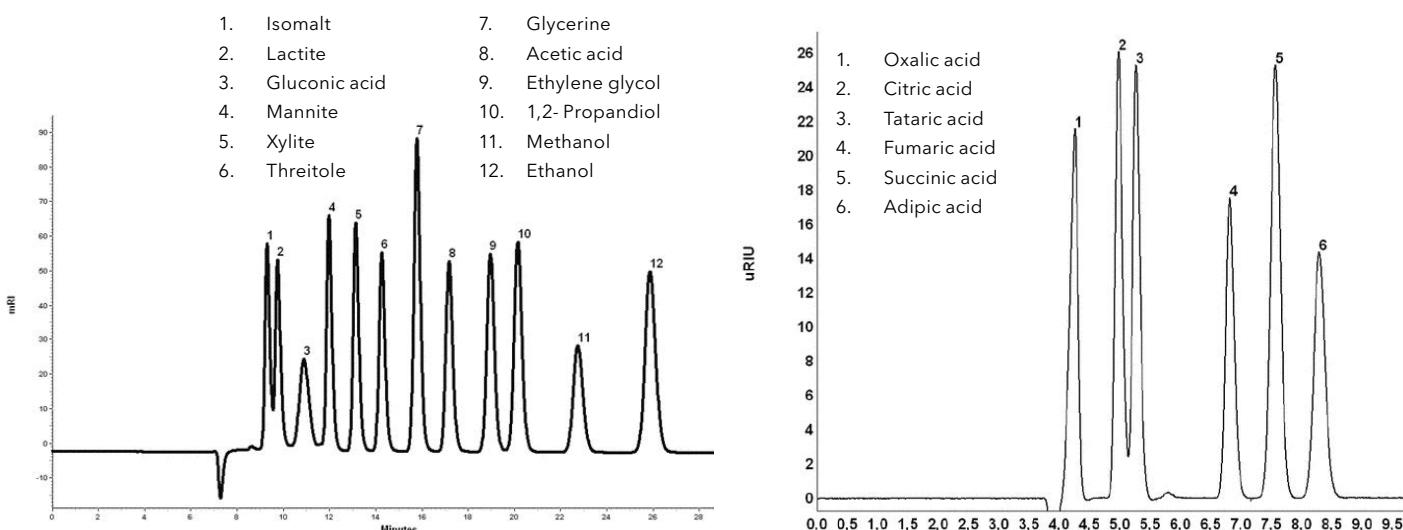

Sulfonated cross-linked styrenedivinylbenzene copolymer with 8 % cross linkage in the ionic form H, available in 10 µm particle size, pressure stable up to maximum 100 bar

### Recommended application areas

Eurokat H is especially designed for the analysis of organic acids and even complex mixtures of acids, sugars and alcohols as well as sugar alcohols.

Due to a differing separation process we recommend the use of these type of columns only in 8 mm ID or 4 mm ID.

**Eurokat H 10 µm, 300 x 8 mm ID**  
Article number: 30GX340EKN

**Tip:** Eurokat columns are characterized by an extremely long lifetime if handled properly. Especially pressure shocks and organic solvent contents of more than 10 % in the mobile phase should be avoided absolutely.

Column length	4 mm ID		8 mm ID

## Eurokat Pb & Ca - USP L34 / USP L19

Polymer phase for the determination of mono- and disaccharides

Pb (USP L34) form, 6 % cross linkage

### Properties

Cation exchanger, extremely long lasting lifetime when correctly handled, best results with aqueous eluents, recommended eluent is pure deionized water, usage of up to 10 % organic content in the mobile phase is possible

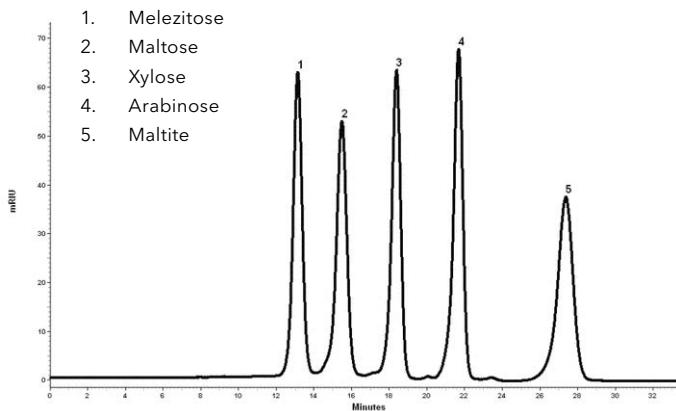

### Technical Data

Sulfonated cross-linked styrenedivinylbenzene copolymer with 6 % cross linkage in the ionic form Pb, available in 10 µm particle size, pressure stable up to maximum 100 bar

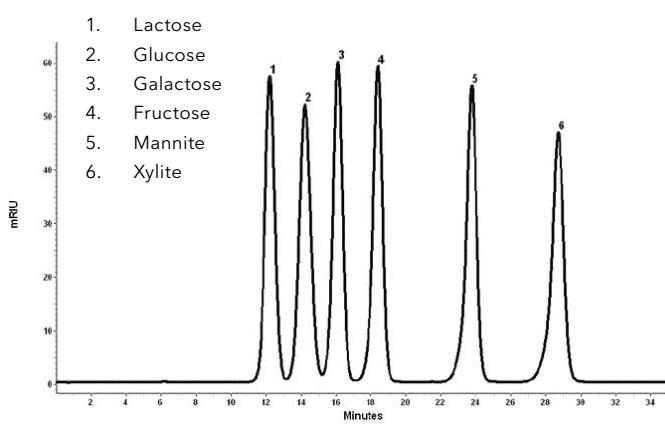

### Recommended application areas

Especially designed for the analysis of small carbohydrates up to DP 4

**Eurokat Pb, 300 x 8 mm ID**  
Article number: 30GX350EKN

**Eurokat Ca, 300 x 8 mm ID**  
Article number: 30GX360EKN

**Tip:** Eurokat columns are used at high temperatures. During equilibration it is very important to have an eye on the backpressure and to start with very low flow rates and increase them only slowly and stepwise after the column has adapted to the temperature.

### Eurokat Pb

## Eurokat Na

Polymer phase for the determination of sugar oligomers

Na form, 6 % cross linkage

### Properties

Cation exchanger, extremely long lasting lifetime when correctly handled, best results with aqueous eluents, recommended eluent is pure deionized water, usage of up to 10 % organic content in the mobile phase is possible

### Technical Data

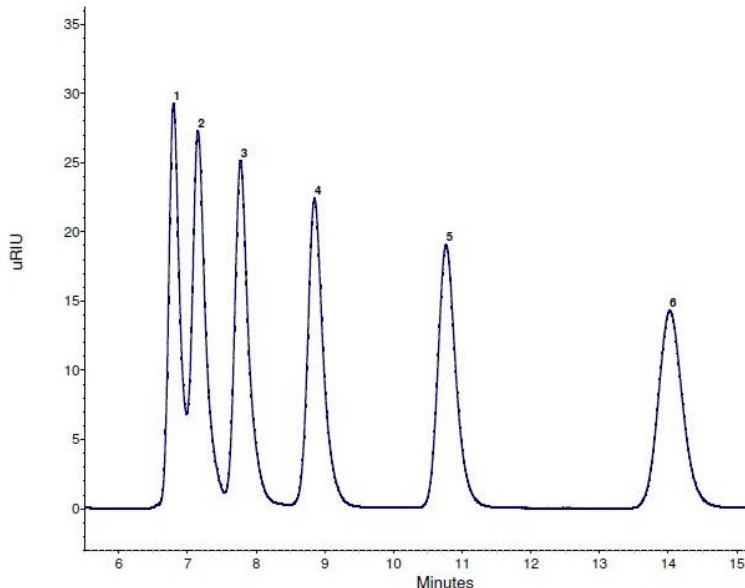

Sulfonated cross-linked styrenedivinylbenzene copolymer with 6 % cross linkage in the ionic form Na available in 10 µm particle size, pressure stable up to maximum 100 bar

### Recommended application areas

Especially designed for the analysis of sugar oligomers, separates carbohydrates up to DP 8

**Eurokat Na, 300 x 8 mm ID**  
**Article number: 30GX210EKN**

1. Fructosylnystose
2. Nystose
3. Kestose
4. Sucrose
5. Glucose
6. Fructose

**Tip:** Eurokat columns are typically used with 100 % aqueous eluents. For storage, please avoid microbial growth by flushing the Eurokat column with 0.45 µm filtered ultrapure water and storing it at 4 °C.

# AppliChrom®

## AppliChrom® ABOA columns for aqueous SEC, organic GPC and special applications

- AppliChrom® ABOA StyDiViBe Series GPC-columns for GPC analysis of organic molecules using THF, toluene, chloroform.
- AppliChrom ABOA SuperOH-P Series for aqueous GPC/SEC-analysis of mainly neutral and anionic polymers like heparins, polysaccharides, PEO, PEG,....
- AppliChrom® ABOA Cat-Phil-P Series for aqueous GPC/SEC-analysis of special aminic and polycationic polymers like p-DADMAc, PEI/polyethylenimin, chitosan, copolymers with polyaminofunctions, but also useful for polyanions or neutral polymers like heparin or PEO/PEG, dextran or pullulan.
- AppliChrom® ABOA DMSO-Phil-P Series for DMSO GPC/SEC analysis (humic substances, UF/MUF-glue, p-NIPA, many polycondensates, protein from pea or leguminosae,...)
- AppliChrom® ABOA DMAc-Phil-P Series for GPC/SEC analysis in DMAc, DMF, NMP. Good for many medium polar substances, polyoxazolines, lignin,....

## You decide between classical GPC/SEC columns with conventional mixed pore technology or AppliChrom® BPT technology:

Separate oligomers and polymers with the new GPC media line from AppliChrom® BPT synthesis technology for large range, high resolution separations with increased accuracy in calibration (Patent pending).

## AppliChrom® ABOA SuperOH-P

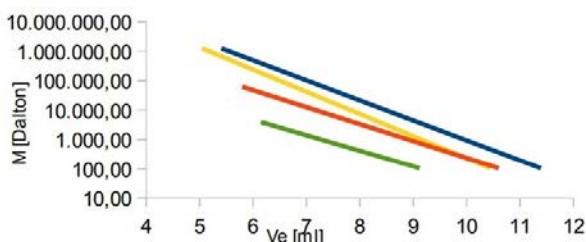

SEC in separation range of 100 - 2 500 Da

### AppliChrom® GPC/SEC columns for biopolymers and aqueous polymers

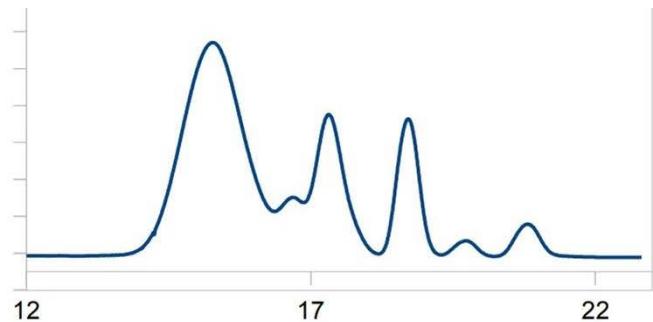

- Aqueous and highly hydrophilic polymeric base material
- Low column bleeding for low detector noise
- Large pore volume for optimal resolution
- Individual pore sizes for individual molecular weight ranges
- Multi-pore technology for a broad range of molecular sizes
- Increased lifetime of GPC/SEC columns by combination of proprietary particle and packing technology

### Pore sizes:

Available pore sizes for different molecular weight ranges

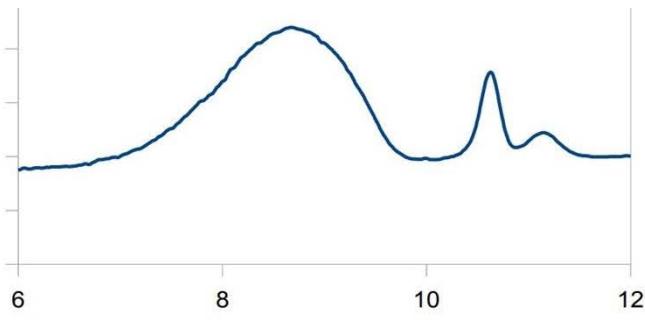

Measurement ranges for Applichrom ABOA SuperOH GPC/SEC columns, 300 x 8 mm, measured in water using PEG/PEO-standards: Porosities **100, 200, 300, 400**

#### AppliChrom ABOA SuperOH-P-100

for high resolution oligosaccharide analysis:  
2 x AppliChrom ABOA SuperOH-P-100, 300 x 8 mm  
0,5 ml/min water, 40 °C, 20 µl injection, RI detection

#### AppliChrom ABOA SuperOH-P-400

For GPC/SEC analysis of pektin:  
1 x AppliChrom ABOA SuperOH-P-400, 300 x 8 mm  
Flow: 1 ml/min H<sub>2</sub>O + 0.2M NaNO<sub>3</sub>, 20°C,  
Sample: 20 µl injection  
Detection: RI

## AppliChrom® ABOA StyDiViBe-P

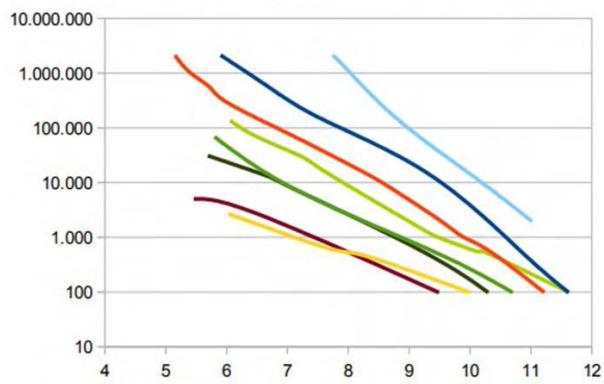

GPC in separation range of 100 - 2 500 Da

### AppliChrom® GPC-columns for GPC analysis of organic molecules using THF, toluene, chloroform

- Organic polystyrene-divinylbenzene copolymer base material of high porosity for high resolution
- Low column bleeding for low detector noise
- High purity for eliminating adsorptive effects and get pure GPC combined with high livetime
- Large calibration ranges covering several decades by unique process of BPT-technology
- Range of individual porosities that can be used single or in combination
- GPC range of 100 - > 50Mio Da

**Molecular sizes range of AppliChrom ABOA StyDiViBe GPC-Serie in detail:**

## AppliChrom® ABOA DMSO-PHIL-P

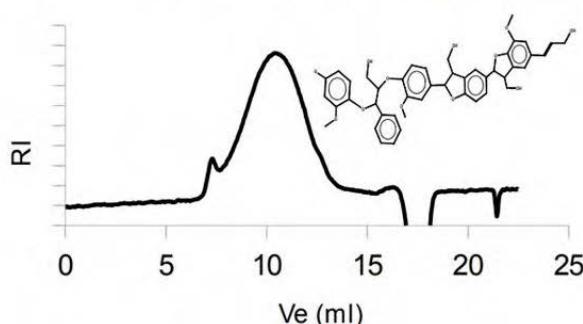

GPC/SEC in separation range of 50k - 10Mio Da

### AppliChrom® ABOA DMSO-Phil optimized for DMSO-GPC applications

- Interactionfree pure GPC/SEC
- Easy, reliable and robust GPC/SEC-calibration by dextrans, pullulans et al.
- Low column bleeding for low detectornoise for improved lightscattering or viscosity detection
- 12µm particle technology for low backpressure
- Large porevolume and optimized mass transfer for polymers giving optimized resolution
- Low costs caused by long livetime of column - result of combination of optimized proprietary particle and packingtechnology

### Lignins & conifer bark extracts

#### Lignin GPC in DMSO – starting method

## **AppliChrom® ABOA DMAC-Phil-P**

GPC/SEC in separation range of 100 - 2 500 Da

### **AppliChrom® ABOA DMAcPhil**

- AppliChrom® GPC columns for GPC analyses in organic solvents (DMAc or DMF)
- organic polymer base material of high porosity for high resolution
- wide range of porosities and particle sizes
- excellent reproducibility
- high purity for eliminating adsorptive effects and get pure GPC combined with high livetime
- GPC range of 100-1.000.000Da
- applications: PMMA, PAN, cellulose, DMF and DMAc soluble polymers

# Sepapure®

In protein purification a combination of different methods is needed for a successful separation. In three steps the purity of the wanted biomolecule is increased.

## Capture

## Intermediate

## Polishing

In the "capture step" the crude biomolecule is extracted from major side products. In the "intermediate step" further contaminations are removed, and the highly pure biomolecule is gained in the "polishing step". For each step a different method and therefore different columns are used.

FPLC Sepapure® columns are dedicated for purification of biomolecules. Sepapure® media for affinity chromatography (AC) and Ion-Exchange chromatography (IEX) is based on Agarose and depending on the specific purification mode functionalized with ligands e.g. Protein A, Ni-NTA or quaternary ammonium (Q). These FPLC media are available packed in 1 ml and 5 ml cartridges or as bulk media.

### Physical properties

<b>Resin</b>	100 µm Agarose particles with 4% or 6% crosslinking
<b>Flowrate</b>	Recommended: 1 CV/ml
<b>pH Stability</b>	3 - 9 long term
<b>Max. pressure</b>	3 bar

### Chromatography (AC)

### Chromatography (IEX)

Sepapure® Desalting columns are based on Dextran with an exclusion limit of 5 kDa and available in 1 ml and 5 ml cartridges.

### Physical properties

<b>Resin</b>	20 - 50 µm Dextran particles
<b>Flowrate</b>	Recommended: 1 CV/ml
<b>Exclusion limit</b>	5 kDa
<b>Max. pressure</b>	3 bar

### Chromatography (SEC)

### All available bulk media at one glance:

## Antibody Affinity Chromatography

FPLC media based on cross-linked agarose beads with a mean diameter of 100 µm.

The FPLC media is functionalized either with Protein A or Protein G ligands for the binding of antibodies or antibody fragments.

### Properties:

Sepapure® Affinity media for antibodies or antibody fragments is designed to be used with most aqueous buffer systems. It is long lasting when correctly handled and are compatible with common CIP strategies. All Sepapure® media is stored in 20% ethanol upon delivery. Available as prepacked 1 ml or 5 ml cartridge or as bulk material.

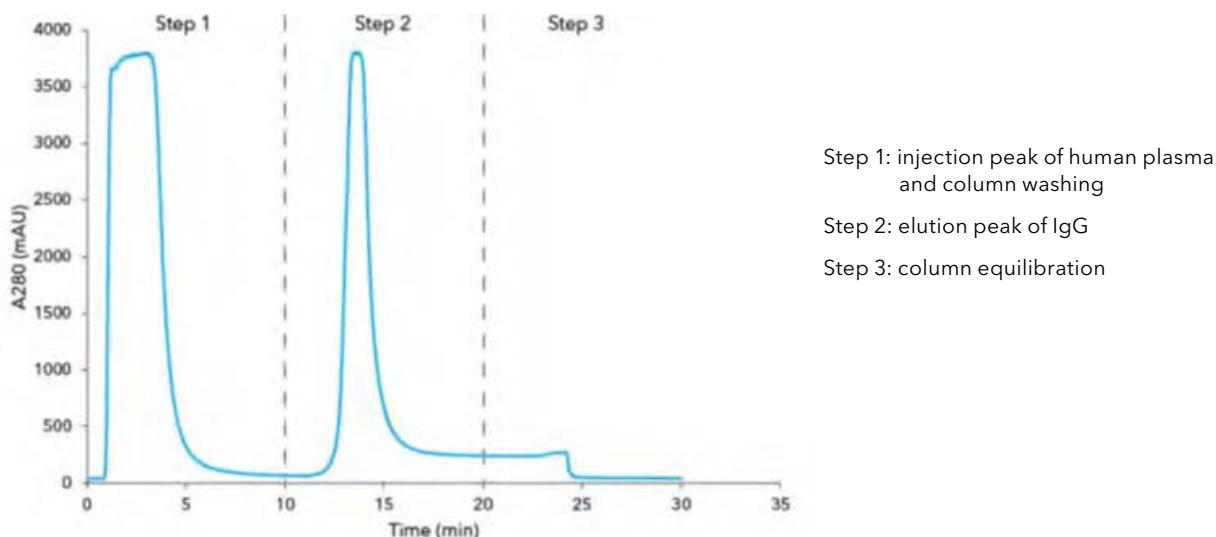

### Technical data:

Agarose beads with typical loading ranges of 1 - 30 mg/l (Protein A column) or 1 - 15 mg/ml (Protein G column). The maximum operating pressure the Sepapure® columns should be used at is 3 bar, while the recommended flowrate is 1 CV/ml.

### Recommended application areas:

Typically used in the first step („capture“) of an FPLC purification procedure.

## Tag-Affinity Chromatography

FPLC media based on cross-linked agarose beads with a mean diameter of 100 µm.

The FPLC media is functionalized with NTA ligands for His-Tag and glutathione ligands for GST-Tag purifications.

### Properties:

Sepapure® Affinity media for recombinantly tagged proteins is designed to be used with most aqueous buffer systems. It is long lasting when correctly handled and are compatible with common CIP strategies. All Sepapure® media is stored in 20% ethanol upon delivery. Available as prepacked 1 ml or 5 ml cartridge or as bulk material.

### Technical data:

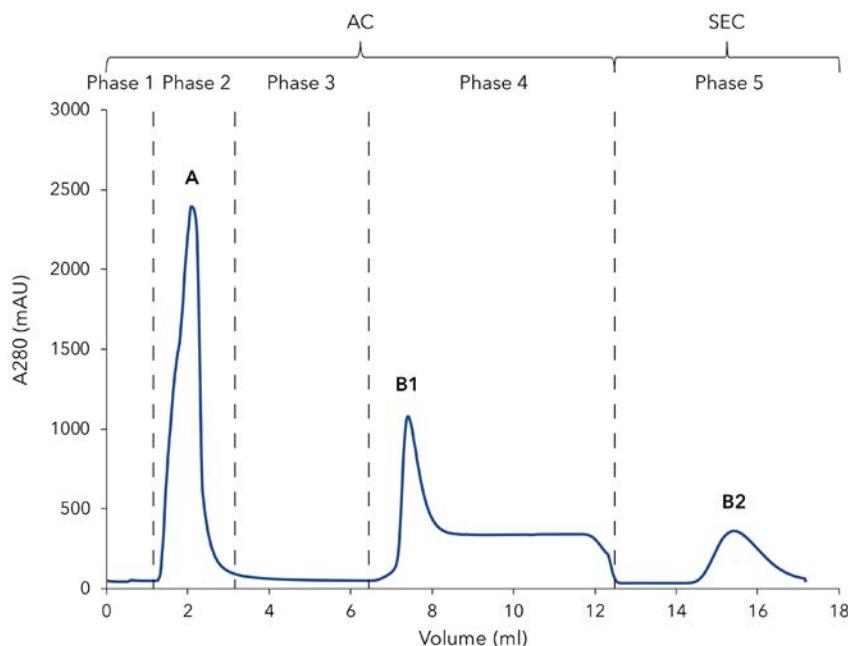

Agarose beads with typical loading ranges of 1 - 40 mg/ml (Ni-NTA) or 1 - 10 mg/ml (Glutathione). The maximum operating pressure the Sepapure® columns should be used at is 3 bar, while the recommended flowrate is 1 CV/ml. Available as prepacked 1 ml or 5 ml cartridge or as bulk material.

### Recommended application areas:

Typically used in the first step („capture“) of an FPLC purification procedure.

**AC - Sepapure Ni-NTA FF 1 ml**  
Article number: 010X39FPSZ

**SEC - Sepapure Desalting 5 ml**  
Article number: 020X460SPZ

- A: flow through of unbound protein

## Ion-Exchange Chromatography

FPLC media based on cross-linked agarose beads with a mean diameter of 100 µm.

The FPLC media is functionalized with different linkers ranging from strong anion exchange ligands to weak cation exchange ligands.

### Properties:

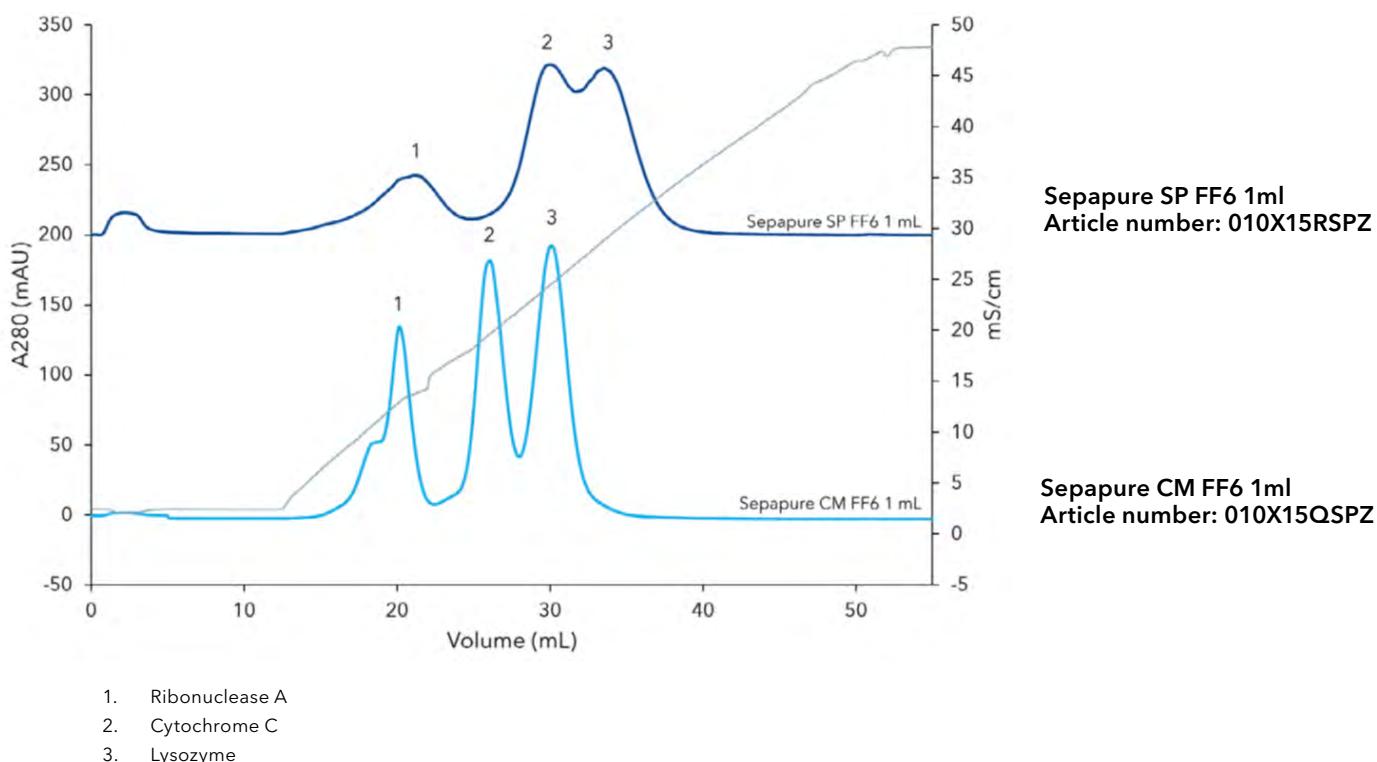

Sepapure® Ion-Exchange media is designed to be used with most aqueous buffer systems. It is long lasting when correctly handled and is compatible with common CIP strategies. All Sepapure® media is stored in 20% ethanol upon delivery.

### Technical data:

The agarose beads are functionalized with a quaternary ammonium for the strong anion exchanger (Q) and with diethylaminoethyl for the weak anion exchanger (DEAE). The strong cation exchanger is functionalized with sulphopropyl (SP) and the weak cation exchanger with carboxymethyl (CM). The maximum operating pressure the Sepapure® columns should be used at is 3 bar, while the recommended flowrate is 1 CV/ml. Available as prepacked 1 ml or 5 ml cartridge or as bulk material.

### Recommended application areas:

Typically used in the intermediate step of an FPLC purification procedure.

Column / Resin type	Cartridge		Media			
	1 ml	5 ml	25 ml	100 ml	500 ml	1000 ml
Sepapure® DEAE FF	010X15ISPZ	020X15ISPZ	00IX15ISPZ	00KX15ISPZ	00PX15ISPZ	00QX15ISPZ

Sepapure® CM FF	010X15QSPZ	020X15QSPZ	00IX15QSPZ	00KX15QSPZ	00PX15QSPZ	00QX15QSPZ
Sepapure® SP FF	010X15RSPZ	020X15RSPZ	00IX15RSPZ	00KX15RSPZ	00PX15RSPZ	00QX15RSPZ

## Size Exclusion Chromatography

FPLC media based on a cross-linked agarose-dextran composite with a mean particle size of 35 µm.

### Properties:

Sepapure® Size-Exclusion media is designed for the preparative purification of biomolecules according to their size. They are long lasting when correctly handled and are compatible with common CIP strategies. All Sepapure® media is stored in 20% ethanol upon delivery.

### Technical data:

The Sepapure® Size Exclusion beads have a fractionation range of either 3 - 70 kDa (Sepapure® SEC 75) or 6 - 600 kDa (Sepapure® SEC 200). The maximum operating pressure of the Sepapure® columns should be used at 3 bar.

### Recommended application areas:

Typically used in the final step of an FPLC purification procedure.

Resin type	Media						
	25 ml	50 ml	100 ml	150 ml	250 ml	500 ml	1000 ml
Sepapure® SEC 75	00IX46SSPZ	00JX46SSPZ	00KX46SSPZ	00LX46SSPZ	00NX46SSPZ	00PX46SSPZ	00QX46SSPZ
Sepapure® SEC 200	00IX46TSPZ	00JX46TSPZ	00KX46TSPZ	00LX46TSPZ	00NX46TSPZ	00PX46TSPZ	00QX46TSPZ

## Desalting Columns

FPLC media based on dextran beads with a mean diameter of 20 - 50 µm.

### Properties:

Sepapure® Desalting media is designed to be used for removal of small molecules below the exclusion limit and for convenient rebuffering. It is long lasting when correctly handled and compatible with common CIP strategies. All Sepapure® media is stored in 20% ethanol upon delivery. Available as prepacked 1 ml or 5 ml cartridge or as bulk material.

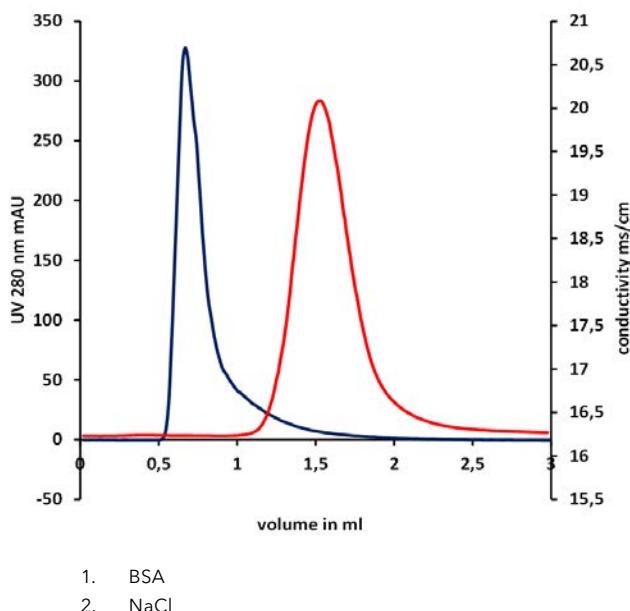

### Technical data:

The Sepapure® dextran beads have an exclusion limit of 5 kDa. The maximum operating pressure of the Sepapure® columns is 3 bar, while the recommended flowrate is 1 CV/ml.

### Recommended application areas:

Typically used in the final step of an FPLC purification procedure or inbetween steps for fast buffer exchange.

	1 ml	5 ml
Sepapure® Desalting	010X460SPZ	020X460SPZ

# Technical documentation

## Equilibration and storage of silica gel based columns like Eurospher II

### Proper storage of silica based HPLC columns

Silica based columns should be stored in an aprotic solvent. The best solvent for storage of RP packings (C18, C8, C4, C1, C30, CN and Phenyl) is acetonitrile/water (50:50 v/v). The water content should not be greater than 50%. The best solvent for storage of NP packings (Silica, Diol, Nitro, Cyano and Amino) is hexan/isopropanol 90:10 (v/v). The best solvent for storage of columns used in HILIC mode (HILIC, Amino, and Silica) is acetonitrile/water (90:10 v/v) or acetonitrile/5 mM ammonium acetate, pH 5,3 (90:10 v/v). Acetonitrile content should always be greater than 90 %.

**Caution!** Even for short-term storage, flush out all buffer solution from the column to prevent algal growth. Make sure that all buffers are washed out of the column before exchanging aqueous mobile phases by organic solvents. Buffer salts are not soluble in acetonitrile and can block capillary tubing and the column.

### Equilibration

The equilibration time of a column depends on the column dimensions. In general, a column is equilibrated after 20 column volumes are flushed through it. The equilibration times for the most important column dimensions are summarized in the following table. You can reduce the equilibration time by simply increasing the flow rate. However, make sure to flush the column with at least 10-20 column volumes to make sure the column is equilibrated.

#### Eurospher II columns with 2 µm particle size, UHPLC:

Column dimension (Length x ID) [mm]	Column volume [ml]	Flow rate [ml/min]	Equilibration time [min]
50 x 2	0.11	0.5	3
100 x 2	0.21	0.5	6

#### Eurospher II columns, classical HPLC:

Column dimension (Length x ID) [mm]	Column volume [ml]	Flow rate [ml/min]	Equilibration time [min]
250 x 4.6	2.82	1.0	28
150 x 4.6	1.69	1.0	17
100 x 4.6	1.13	1.0	12
50 x 4.6	0.56	1.0	6
250 x 4.0	2.14	1.0	22
150 x 4.0	1.28	1.0	13
125 x 4.0	1.07	1.0	11
250 x 3.0	1.20	0.6	20
150 x 3.0	0.72	0.6	12
100 x 3.0	0.48	0.6	8
50 x 3.0	0.24	0.6	4
250 x 2.0	0.53	0.25	21
150 x 2.0	0.32	0.25	13
100 x 2.0	0.21	0.25	9
50 x 2.0	0.11	0.25	5

## Regeneration of silica gel based columns like Eurospher II

### Regeneration of a column

We recommend regenerating a column if a change in peak form, retention time, resolution or an increase in backpressure is observed. If the system pressure begins to rise, remove the column and check the system to find whether the pressure increase is being caused by the system or the column. Pressure increase caused by system: flush system, exchange eluent filters, frits and/or blocked capillaries.

Pressure increase caused by column: backflush the column carefully to remove particle buildup from the inlet frit (connect the column outlet to the pump/injector and flush). Do not connect the column to the detector. If the column still has a high backpressure, flush the column according to the following regeneration scheme.

### Regeneration scheme

<b>RP columns</b> (C18, C8, C4, C1, C30, CN and Phenyl stationary phases)	<b>NP columns</b> (Silica, Diol, Nitro, Cyano and Amino stationary phases)	<b>Columns used in HILIC mode</b> (HILIC and Silica stationary phases)
20 CV* water	20 CV heptane	20 CV water
20 CV acetonitrile	5 CV isopropanol	30 CV 0.5 M ammonium acetate
5 CV isopropanol	20 CV acetonitrile	30 CV water
20 CV heptane	20 CV water	20 CV acetonitrile/water (50:50 v/v)
5 CV isopropanol	20 CV acetonitrile	20 CV acetonitrile
20 CV acetonitrile	5 CV isopropanol	20 CV acetonitrile/water (50:50 v/v)
	20 CV heptane	

\* CV = column volumes

After the regeneration procedure, re-equilibrate the column with the mobile phase before analyses.

## Eurokat column care and regeneration

### Column maintenance tips

- The maximum pressure limit during operating should not be exceed 90 bar. The maximum pressure for the column material is 100 bar.
- Forceful mechanical handling (bumps, shocks) as well as sudden temperature changes should be strictly avoided to conserve the homogeneity of the packed column bed.
- Water used in preparation of the mobile phase should be either fresh double-distilled or HPLC-grade.
- All reagents used in sample preparation (solvents, reference compounds, etc.) should be of p.a. grade. Particulate matter and precipitates must be removed from the sample by filtration before injection.
- Changes in column temperature should only be undertaken under continuous eluent flow. As a principle, drastic temperature changes should always be carried out in gradual steps.
- The optimal temperature range for the analysis of carbohydrates is 60 - 90°C.
- During heating process from room temperature keep the flow low at 0.1 ml/min for 4 mm and 0.2 ml/min for 8 mm columns up to 60 °C.

- Flow rate changes should also only be carried out stepwise.
- Optimal flow rates are typically between 0.1 - 0.2 ml/min for 4 mm diameter columns and 0.4 - 0.8 ml/min for 8 mm diameter columns.
- If the column is not to be used for a longer period, the inlet and outlet should be sealed with appropriate blind fittings to prevent the polymer material from drying out. For longer term storage, the column should be kept at 8°C to avert bacterial growth.

### **Column regeneration procedure**

- Eurokat columns can be regenerated in their corresponding ionic form. Regeneration of the polymer resin is important to maintaining the selectivity and lifetime of the column material. If metal ions or organic components are present in the sample, these materials may settle on the resin material or even react with the polymer, resulting in a gradual loss of column performance. Through periodic cleaning of the column, lifetime and performance can be significantly prolonged. To clean the resin, Eurokat Pb, Ca and Na columns should be flushed for at least 4 hours (preferably overnight) with double-distilled water at a flow rate of 0.2 ml/min (8 mm ID column) in the reverse direction at 60 - 75 °C. Eurokat H columns can be cleaned in a similar manner but require 0.01 N sulfuric acid.
- The column should then be rinsed for an additional hour with the same cleaning eluent in the normal flow direction at 75 - 85 °C. Maintaining this flow direction and temperature, Eurokat Pb, Ca and Na columns should then be purged with a mixture of 10 % acetonitrile and 90 % water. Eurokat H columns should be purged with 10 % acetonitrile and 90 % 0.01 N sulfuric acid.

After this cleaning process, the column is to be regenerated through purging with following parameters:

<b>Flow rate</b>	0.2 ml/min
<b>ID column</b>	8 mm
<b>Time span</b>	4 - 6 hours
<b>Temperature</b>	75 - 85 °C
<b>Cleaning eluent</b>	Eurokat Pb: 0.25 mol/l lead nitrate Eurokat Ca: 0.25 mol/l calcium nitrate Eurokat Na: 0.25 mol/l sodium chloride or 0.1 mol/l sodium hydroxide Eurokat H: 0.05 mol/l sulfuric acid

Once this procedure has been completed, the desired flow rate may be resumed gradually. The column is now ready for further analyses and can be put back into normal use once having gradually reached the working temperature.

### **Column using tips**

- In general it is recommended that a precolumn (30 x 8 mm or 30 x 4 mm) should be used. In order to eliminate undissolved particles or precipitates, the sample should be filtered through a 0.45 µm filter unit. Particulate matter in the eluent is removed by installing a column inlet filter between the injector and the column.
- To avoid contaminating the detector's measurement cell, neither the cleaning solution nor the regenerant should pass through the measurement cell.

# KNAUER - a success story

We are an established partner in science. Today and in the future.

# Terms and conditions

## 1. Definition of terms

The following terms and conditions apply to every order received by KNAUER and every delivery of goods. This holds as well in case of contradictory buying conditions of the purchaser. Exceptions are only valid when confirmed by KNAUER in writing. Purchase orders are only binding if confirmed by KNAUER in writing.

## 2. Payment

Deliveries are due and payable, net, within 30 days of invoice date or in advance. Deductions are not allowed. Foreign deliveries must be paid by irrevocable letter of credit or in advance. All bank and transfer fees must be paid by the customer. The consequences arising out of delay are due to statutory provisions. Payments are due irrespective of an eventual notice of defect, except such defects are evidently justified.

## 3. Delivery

Delivery dates are not binding unless expressly stated in the contract as binding dates. Delay in delivery requires a written reminder and an adequate additional grace period set by the customer. KNAUER is only liable for claims for damages under the requirements of no. 6.

## 4. Claims

Condition for any warranty claim is the immediate inspection of the goods upon delivery, and complaint towards and damage assessment together with the carrier, and an immediate written complaint to KNAUER. The complaint must be made within five workdays in case of visible defects or losses.

## 5. Risk liability

Delivery is made at the customer's own risk. As soon as the goods leave KNAUER's plant the risk of accidental loss, destruction or deterioration passes to the customer.

## 6. Warranty and damages

### 6.1. Warranty claims

The warranty begins with receipt of the goods. If commissioning has been ordered, after commissioning. In the case of delayed commissioning, the warranty begins at the latest four weeks after receipt of the goods unless the supplier is responsible for delayed commissioning.

The warranty for osmometers and liquid chromatography instruments is limited to two years, excluding glass breakage, damages due to stoppage and consumable materials such as membranes, light bulbs, columns, bushings, gaskets and valves. KNAUER's liability shall be restricted to the replacement of defective material or repair only. Transportation costs are borne by the customer. In case of failure of replacement or repair the customer may demand a reduction in price or cancellation of the contract with respect to the defective material. The customer has to inspect the goods delivered immediately and shall immediately give written notification of any defects to KNAUER, in case of non-obvious defects within 10 working days after delivery at the very latest.

## 6.2. Claims for damages

The liability of KNAUER shall be restricted to intentional acts and acts of gross negligence and compensation shall only be due for direct, foreseeable damages. Liability for breach of a material, essential duty of the contract, liability because of personal injury, liability according to the stipulations of the German Law on Product Liability and liability for the lack of the condition of the contract goods guaranteed by KNAUER remain unaffected.

## 7. Third party rights on industrial or other intellectual property

KNAUER shall not be liable for the infringement of third party rights founded on industrial or other intellectual property caused by the use of the delivered goods. The customer is fully responsible for the products manufactured with the goods. In particular KNAUER is not obliged to indemnify and hold harmless the customer from all claims raised by third parties based on the infringement of their industrial or intellectual property rights by the use of the goods.

## 8. Property rights

The ownership of the goods shall remain with KNAUER until payment in full for all our claims resulting from our business relation is received. In case of improper treatment of the goods or in case of default KNAUER may demand the return of the delivered goods. This demand entails resignation of the contract only if KNAUER declares it explicitly.

Resellers are allowed to sell the goods to third parties in due course of the business. The customer herewith assigns his resale claims against third parties to KNAUER.

## 9. Export

Instruments and products delivered by KNAUER may not be exported to a country other than of the customer's headquarters without KNAUER's prior written permission.

## 10. Place of settlement and court of jurisdiction

The place of performance is Berlin. Proper venue for all claims is the competent local court at KNAUER's principal place of business - Berlin. KNAUER reserves the right to sue the customer at his principal place of business.

This agreement shall be governed by the laws of the Federal Republic of Germany excluding the UN-Convention on the International Sale of Goods (CISG).
